

For Sale, 2-meter pattern plane for \$250

The Composite-ARF Impact is a high end, fully composite F3A pattern aircraft designed for precision aerobatics and competition, known for its lightweight strength and exceptional handling.

The Impact is a 2 meter F3A pattern plane manufactured by Composite ARF (Jason Shulman) and has been used to win national aerobatic title. It is built entirely from composite materials – from the fuselage to the tail feathers — giving it a high strength to weight ratio and excellent durability.

This Impact was originally configured for a fuel engine. It was converted years ago to electric. The motor, ESC and servos were chosen for a pattern airplane.

This is a perfect plane for someone interested in starting to fly a 2-meter pattern plane. Just add a receiver to start your flying experience.

Just \$250.

Thanks,

Dave 703-999-5164
